

HEARTSafe Community

The Connecticut Department of Public Health Office of Emergency Medical Services (OEMS), in collaboration with the American Heart Association, aim to help Connecticut's municipalities, workplaces and campuses improve the chances of survival to anyone suffering a sudden cardiac arrest. To date, 110 of the 169 Connecticut municipalities are designated HEARTSafe Communities and Windsor has been 1 of those municipalities and first received that designation in 2014.

The HEARTSafe Designation needs to be renewed every 3 years, so the Windsor Health Department is collecting the required information to submit to the Healthcare Quality and Safety Branch of the Connecticut Department of Public Health.

As a Windsor Business, please identify where your AEDs are located, the number of staff trained to respond and if there is an emergency response team. Please complete the questions below and return to Jennifer Waldo RN, MS, Windsor Public Health Nurse, at waldo@townofwindsorct.com.
